

STRATUS® ftServer WITH SIGHTLINE ASSURE®

Ensure continuous availability of business critical applications from one fault-tolerant system

Organizations need end-to-end solutions that protect the entire stack and ensure continuous availability. Stratus ftServer provides the continuous availability required to ensure the infrastructure your mission critical applications run on never experience a failure. Stratus and Sightline Systems have partnered to provide an easy to use solution that can monitor the entire stack and proactively identify a failed application and automatically restart it.

Sightline Assure is designed to provide a single, unified view of the hardware, operating system and software applications needed to keep environments running at all times. Sightline Assure collects and analyzes hundreds of real-time system metrics to optimize the performance of system environments. When Sightline Assure identifies a failed application it will automatically restart it to prevent downtime and data loss. Now you can benefit from this easy-to-use application to provide insight without the complexity of traditional IT-industry software.

Key Benefits

- Continuously monitor the health and availability of one or many servers from a single dashboard
- Access a single pane of glass view of mission critical IT infrastructure
- Maximize uptime for the OS and software applications running in physical or virtual environments
- Continuously monitor system resources and automatically restart unavailable applications
- Customize alert thresholds to provide real-time email notifications of potential issues
- Create customized daily or weekly reports to be automatically sent via email
- Support for VMware, Windows and Linux operating systems on ftServer

Stratus & SIGHTLINE ASSURE

- Easy to navigate interface
- Monitors all required components in a solution stack
- Automatically restarts failed applications or services
- Out-of-the-box integration with Stratus ftServer
- Support of commodity servers and networking devices

Key Features

Easy-to-Use Dashboard

Sightline Assure allows operational teams to access a single pane of glass view of your business critical infrastructure. All active operating system, application and hardware alerts are aggregated and color-coded to users to take immediate action to prevent potential downtime.

Automatically Identify and Restart a Failed Application

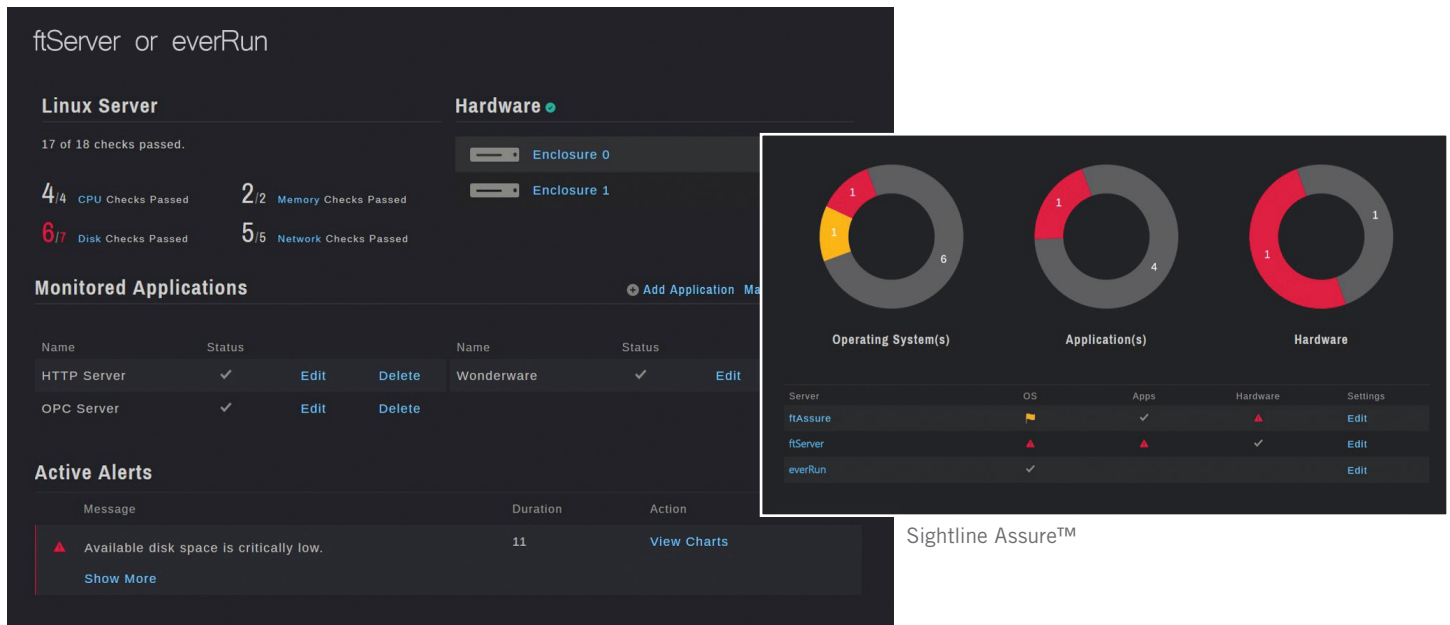

When an application experiences an unrecoverable error, Sightline Assure communicates with the application and performs a series of actions to automatically restart it.

Powerful Analytics Engine

Sightline Assure continuously monitors physical and virtual system resources and performs hundreds of ongoing CPU, disk space, memory and network usage checks. Users receive early warning reports of capacity issues, degraded application performance and critical system errors.

Detailed Alert History and Email Notifications

Sightline Assure highlights active alerts and provides a comprehensive alert history for all business critical servers, operating systems and monitored applications.

Sightline Assure™

Sightline Assure™

Sightline Assure provides a single, unified, at-a-glance view of the health and availability of industrial IT hardware, operating systems and software applications.
